(54) GLOVE CAPABLE OF FIXING FINGERTIP, AND FINGER SACK AND ATTACHMENT

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a pair of gloves improved in workability through improving the fingertip parts of gloves and finger sacks both having poor fittedness and obtaining a fingertip structure capable of preventing the influence of the nail.

SOLUTION: The pair of working gloves 1 have each an adhesive layer 2 on a part of an inside surface corresponding from the fingertip to the secondary joint on at least the thumb 1a and the index finger 1b of the body of the glove 1. The pairing glove is provided through putting a separation paper 3 between the pair. Slackening of the

fingertip part of the gloves is prevented by adhering the fingertip part onto the finger with the adhesive layer 2. The adhesive layer 2 can also be put into practice through sticking a double-sided self-adhesive sheet and also with a finger sack for gloves having an adhesive layer on the finger sack. Trouble due to nail is eliminated by fixing through filling a silicone bouncing putty in a space between the nail and the glove.
